

## SOE2019 YO symposium 2am in the morning – an ocular emergency survival guide

It's late, very late. 2am to be exact. You are on call all alone in the eye unit and patients showed up with conditions needing immediate attention. Have you got what it takes to manage these cases, so that you can sleep well the next day knowing that you did the right thing?

This session is designed to provide young ophthalmologists a practical guide to recognize and diagnose a number of acute ophthalmic emergencies, and to safely and effectively manage these emergencies so that sight could be saved.

Featuring an all-star panel of young ophthalmologists from around the world, the session aims to provide a comprehensive summary of emergent conditions across all subspecialties in ophthalmology.

- Francesco Aiello from Italy will discuss corneal emergencies and how to solve that cloudy enigma.
- For glaucoma, Gauti Johannesson from Sweden is going to give us a summary of what to do in face of high intraocular (and blood) pressure.
- Originally from Lithuania, Neringa Jurkutė has been across Europe and is going to share with us her advice in dealing with neuro-ophthalmological emergencies.
- When it comes to vitreoretinal problems, Jelena Potic from Serbia will tell us how to get out of these sticky situations.
- And Purnima Patel from United States will discuss uveo-retinal conditions that you cannot afford to miss.

Come and join us so that next time when you are woken up at 2am in the morning, it would not be a nightmare situation that you could not handle!
